

## ULTRA PEARLS AND LITTER PEARLS MAINTENANCE INSTRUCTIONS

1. Fill your litter box 2-3 inches full of litter.  
*Amount of bag(s) will vary based on the size of litter box.*
2. Scoop out feces daily and dispose of properly.
3. Stir entire contents of litter box thoroughly, paying extra attention to the litter on the bottom.
4. When the Pearls have become saturated and are no longer controlling odor, empty the entire litter box, dispose of the contents properly, and clean the litter box with warm soapy water.

### Special Notes:

- If your cat is sensitive to changes in litter, start by adding Ultra Pearls or Litter Pearls on top of your old litter. As your cat becomes familiar with the Pearls, gradually increase the amount of Pearls vs. the old litter until the entire litter box is Pearls.
- Many cats have a tendency to use the bathroom in the same spot, or down the side of the litter box, which may cause pooling at the bottom of the litter box. When you stir the litter, you want to make sure and move the 'used' Pearls to another spot in the litter box and allow 'unused' Pearls to be where your cat likes to use the bathroom. Doing this daily will maximize the life of your Pearls Litter, and the length of time it controls litter box odor!
